Oxford County has initiated a Class Environmental Assessment (EA) to examine wastewater servicing alternatives for the Community of Princeton. Properties within Princeton are currently serviced by private sewage disposal systems which are the responsibility of each private property owner. The purpose of this study is to determine the most cost-effective, environmentally sound, and sustainable approach to provide wastewater servicing for Princeton, to meet the needs of the community within a 25-year design horizon.

The study will be undertaken as a Schedule C project in accordance with the requirements of the Municipal Class Environmental Assessment (Municipal Engineers Association, June 2000, as amended in 2007), and will include several opportunities for public comment.

Public input and comments will be an important component of the Class EA process. Two Public Information Centres (PICs) will be held during the course of the study to present and receive comments on the project, alternative solutions, and the preferred alternative for the provision of wastewater servicing. Notices for each PIC will be advertised in advance of the public meetings.

Please contact either of the following project team members if you have any questions or comments, if you wish to obtain more information on the study, or if you wish to be added to the mailing list to receive future notifications of the study:
